

DEBORAH DOVIN SANG

Technical Sales Engineer | Medical Devices & Healthcare Solutions
+254 706 091 352 | dovindeborah@gmail.com | Nairobi, Kenya

PROFESSIONAL SUMMARY

Results-driven Technical Sales Professional with hands-on experience in science-based field sales, client consultations, and technical product support. Holds a BSc in Polymer Chemistry (Second Class Upper, Dedan Kimathi University of Technology) with applied knowledge in laboratory processes, materials science, and water purification technologies — including direct operational experience with Reverse Osmosis (RO) systems used in renal/dialysis applications. Proven ability to communicate complex technical concepts to diverse clients, manage sales pipelines, build lasting relationships, and develop new business opportunities across multiple regions. Combines strong scientific grounding with a genuine passion for consultative selling and delivering solutions that make a tangible difference to healthcare outcomes.

KEY COMPETENCIES

Technical Sales: Consultative Selling | Product Demonstration | Needs Assessment | Proposal Writing | Pricing & Negotiation | After-Sales Support | CRM Pipeline Management | Lead Generation | Business Development

Technical Knowledge: Reverse Osmosis (RO) Systems incl. Renal/Dialysis Applications | Water Treatment & Purification | Polymer Chemistry | Laboratory Testing & Analysis | ISO/IEC 17025 Standards | Quality Control

Soft Skills: Communication & Presentation | Relationship Building | Regional Territory Development | Problem-Solving | Attention to Detail | Team Collaboration

Software: CRM Tools | Microsoft Word | Excel | PowerPoint

PROFESSIONAL EXPERIENCE

Sales & Technical Representative | Aquatreat Solution Limited — Nairobi, Kenya | 09/2025 – Present

Technical Sales & Business Development

- Conducted site assessments, product demonstrations, and technical consultations for water treatment systems — experience directly transferable to positioning medical device and equipment solutions for clinical clients.
- Developed in-depth knowledge of Reverse Osmosis (RO) technology, including its application in renal/dialysis water purification, understanding critical water quality parameters (conductivity, TDS, endotoxin control) essential for safe patient outcomes.
- Managed end-to-end sales cycle for domestic and commercial water treatment plants — from prospecting and needs assessment through proposal writing, pricing negotiation, installation support, and after-sales service.
- Built and maintained a portfolio of institutional and commercial clients through consultative selling, regular follow-ups, and technical advisory support — achieving high retention and referral rates.
- Proactively identified new business opportunities through networking, field visits, and regional outreach — expanding the client base across Nairobi and surrounding areas.
- Utilised CRM tools to manage the sales pipeline, log client interactions, schedule follow-ups, and produce sales performance reports — ensuring visibility and accountability across the client lifecycle.
- Supported execution of marketing campaigns, product promotional events, and digital outreach to increase brand awareness and drive lead generation.

RO Systems & Technical Knowledge — Renal Application

- Gained practical knowledge of Reverse Osmosis plant operation as used in renal care (haemodialysis) settings, including understanding of multi-stage filtration, pre-treatment requirements (sediment/carbon/softener stages), RO membrane function, and post-treatment monitoring.
- Familiar with critical water quality standards for dialysis water — including AAMI/ISO 23500 parameters for chemical and microbiological purity — and the importance of system validation, sanitisation cycles, and ongoing quality monitoring to protect patient safety.
- Able to translate RO system technical specifications and clinical relevance into clear, compelling sales conversations for hospital procurement teams, biomedical engineers, and clinical staff.

Attaché — Polymer Laboratory (Industrial Placement) | Kenya Bureau of Standards (KEBS) — Nairobi, Kenya | 01/2023 – 03/2023

- Conducted rigorous laboratory testing of polymeric materials for compliance with national and international standards.
- Supported ISO/IEC 17025 audit readiness through meticulous documentation, sample traceability management, and detailed test report drafting.
- Gained exposure to regulatory and quality frameworks applicable to medical-grade and industrial materials — including documentation standards relevant to the medical devices sector.

TRAINING, CERTIFICATIONS & AWARDS

Sales & Marketing Training — Aquatreat Solution Limited, Nairobi

Structured training in technical product sales, CRM pipeline management, customer engagement, and market development strategies.

Water Treatment Workshop — JKUAT, Nairobi

Professional workshop covering water treatment processes, purification technologies (including RO systems), and sustainable water management approaches.

International Plastics Expo (KEPRO) — KICC, Nairobi | July 2023

Exposure to global polymer applications, healthcare materials innovation, and sustainability trends.

Presidential Award for Community Service — 2022

Recognised for outstanding contribution to community service under the Presidential Awards Programme.

EDUCATION

Bachelor of Science — Polymer Chemistry

Dedan Kimathi University of Technology | Nyeri, Kenya | 2020–2024 | **Second Class Upper Division**

- Final Year Research Project: Application of Xanthan Gum Hydrogel in Water Purification — led research on cost-effective, eco-friendly purification technology, highly relevant to medical-grade water treatment and dialysis applications.
- Biopolymer Production from Starch (2024) — synthesis and characterisation of sustainable bio-based polymers; relevant to biocompatible materials used in medical devices.
- Adhesive Development using Polystyrene and Acetone (2023) — practical polymer formulation and performance testing.
